

DON'T GET HACKED!

Basic Security Priorities to Keep your Organization Safe

KNOW YOUR ASSETS

Maintain an accurate inventory of IT hardware, applications used by the organization, and sensitive data sets.

INSURE AGAINST RISK

Obtain insurance coverage that addresses the organization's information system risks. The devil is in the details!

PROTECT FROM HARM

Implement endpoint protection and malware defenses that provide continuous monitoring on all workstations and servers.

TRAIN YOUR STAFF

Internal error is the leading cause of data breach. Provide regular, engaging security awareness training!

CONTROL PRIVILEGES

Restrict the number of users with administrative privileges to workstations, servers, domains, and sensitive applications.

MONITOR INFO SYSTEMS

Monitor information system security so you can detect and respond to a breach as quickly as possible.

BACK IT UP

Develop robust backup and disaster recovery capabilities... be sure to keep one backup copy off-network!

ASSESS REGULARLY

Conduct regular security risk assessments to know the worst-case impacts. Employ ongoing risk management.

MANAGE VULNERABILITY

Engage in continuous vulnerability management, including scans and patches.

SECURE YOUR SYSTEM

Establish standardized secure configurations for key systems within your organization.

ENCRYPT EVERYTHING

Enable full disk encryption on all laptops, mobile devices, workstations, servers, and databases.

DON'T GO IT ALONE! Let the experts at Eagle Consulting Partners help you secure your organization's data with our comprehensive information security services. With [Security Risk Assessments](#), ongoing [Risk Management](#) services, [Disaster Recovery Plan Development](#), and [Security Awareness Training](#), we can work with you to protect your organization!
